Profile

Software Engineer with over 5 years of experience building and scaling software applications using React, Next.js, TypeScript and JavaScript. Experienced in leading frontend development for complex enterprise systems, including ERP supporting HR operations, with responsibility for frontend architecture, state management and performance optimization, while also contributing to backend services and API integration. Skilled at translating complex business requirements into scalable and accessible user experiences while collaborating closely with cross functional teams.

Technical Skills

Frontend: React, JavaScript (ES6+), TypeScript, React Native, Next.js, Redux Toolkit, TailwindCSS, Material-UI, Styled Components.

Backend & Databases: Node.js, Express.js, MongoDB, GraphQL, REST APIs, PostgreSQL

Testing & CI/CD: Jest, Cypress, React Testing Library, Travis CI, GitHub Actions

DevOps & Cloud: AWS (EC2, S3, Lambda), Docker (basic)

Tools & Design: Vite, Webpack, Figma, Jira, SASS, Postman, Git/GitHub

Professional Experience

[Emerald Energy Resources Limited — Software Engineer](#)

Aug 2021 – Present

Project: EERL Interact — Enterprise Resource Planning Application.

- Led a team of 5 engineers in delivering the frontend of a company-wide ERP platform supporting HR operations, payroll workflows, and employee lifecycle management for 200 internal users, contributing to a 40% reduction in administrative workload.
- Designed and implemented a scalable dashboard architecture using React, TypeScript, and Redux Toolkit, improving performance and maintainability across data-heavy modules.
- Implemented secure authentication and role-based access control across the frontend to manage access to sensitive employee data and administrative functionality based on user permissions.
- Integrated backend APIs and automated key business workflows.
- Improved UI performance for large reporting tables by implementing row virtualization and memoization strategies, allowing seamless rendering of large datasets.

- Wrote and maintained unit and end-to-end tests for key user workflows, helping catch regressions early and improve application reliability.
- Oversaw CI/CD pipelines using Travis CI and GitHub Actions.
- Mentored junior developers on React best practices, reducing onboarding by 50%.

Tech Stack: React, Redux Toolkit, Node.js, MongoDB, Travis CI, Material-UI, GitHub

The GIG Group — Software Developer

Dec 2020 – Aug 2021

Project: GIGM Web Application — an online transportation ticket booking platform.

- Designed and implemented key user-facing components using React, Bootstrap, and jQuery.
- Worked closely with backend teams to ensure responsive UI and smooth API integration.
- Assisted in migration of jQuery application to a more performant React application.
- Improved overall page responsiveness and accessibility for desktop and mobile platforms.

Tech Stack: React, jQuery, Bootstrap, Animate.css, Bitbucket, Jira

Swapspace — Frontend Developer

Mar 2020 – Dec 2020

- Built and shipped frontend features in a fast-paced startup environment for a developer learning and collaboration platform.
- Contributed to projects using React, Vue.js, and GraphQL, integrating backend APIs.
- Worked in a dev environment focused on mentoring, peer review, and agile workflow.

Tech Stack: React, Vue.js, GraphQL, Redux, Laravel, PHP, MySQL, MongoDB

Education

Bachelor of Science (B.Sc.) in Applied Physics

University of Lagos, Nigeria

Projects

Enterprise Resource Planning Application — <https://jlb-rbac-erp.netlify.app>

A full-featured ERP portfolio application showcasing metrics dashboards, payroll, leave and loan workflows, audit logs, and role-based access control, adapted from a professional internal ERP project without proprietary data.

Voice AI Assistant — <https://voice-text-app-nu.vercel.app>

A full-stack voice-powered AI assistant that transcribes spoken questions, generates contextual text responses, detects silence automatically, and uses live web search to provide up-to-date answers.

RSS Feed Aggregator — <https://jlb-rssfeed.netlify.app>

A full-stack RSS/Atom aggregator with feed normalization, deduplication, caching, scheduled refreshes, authentication, saved feeds, and fault-tolerant source handling.
