Profile

Software Engineer with 6+ years of experience building and evolving HR and ERP platforms across web and mobile, using React, Next.js, TypeScript, Node.js and Python. Led a five-engineer team to deliver employee management, payroll, finance and analytics solutions, from architectural design and backend APIs to secure production deployment. Achieved measurable impact results, including a 40% reduction in HR administrative workload, an 80%+ improvement in reporting tables load times and a 50% reduction in engineering onboarding time. Experienced in modular architecture, workflow orchestration and technical mentorship.

Technical Skills

Frontend: React, React Native, TypeScript, JavaScript (ES6+), Next.js, Redux Toolkit, Chart.js, Tailwind CSS, Material-UI.
Backend & Databases: Node.js, Express.js, MongoDB, Python, FastAPI, PostgreSQL, GraphQL.
Testing & CI/CD: Jest, Cypress, React Testing Library, GitHub Actions, Travis CI.
DevOps & Cloud: AWS (EC2, S3, Lambda), Docker (basic), CI/CD and production debugging.
Tools & Design: Git/GitHub, Figma, Jira, Vite, Webpack, Claude Code, Codex.

Professional Experience

Emerald Energy Resources Limited — Software Engineer (Full Stack)
Aug 2021 – Present

Product: EERL Interact — ERP Application

- Led a team of five engineers to deliver HR SaaS capabilities across employee lifecycle, payroll and approvals, worked with product and design to scope initiatives, guide technical decisions and deliver reliable releases.
- Defined a modular React and React Native architecture with clear feature boundaries, reusable UI primitives, predictable Redux state management and typed API contracts, allowing engineers to deliver interconnected workflows consistently.
- Owned Node.js API design for employee self-service and leave management, separated business rules, authorization and data validation to support balances, approval policies, exceptions and secure updates to employee records.
- Designed reusable approval orchestration for requisitions and expenses, modelling conditional multi-stage routing, delegated decisions, notifications, audit trails and controlled state transitions instead of duplicating workflow logic across modules.
- Developed payroll and employee finance module supporting payslip management, employee loans and finance requests, with role-based access control checks protecting sensitive employee and financial data across APIs and interfaces.
- Engineered operational dashboards with Chart.js and optimised expensive React rendering using virtualization and memoization, reducing large reporting table load times from approximately 5 seconds to under 1 second.

- Strengthened release reliability with unit and end-to-end tests for approval, payroll and permissions workflows and production debugging to catch regressions.
- Drove code reviews, automated CI/CD pipeline, AWS infrastructure and production deployment.
- Leveraged AI tools for technical exploration, code generation & review, debugging, & research.
- Mentored junior engineers through design reviews, debugging sessions and implementation guidance, established reusable engineering patterns and helped reduce new developer onboarding time by approximately 50%.

Tech Stack: React, React Native, TypeScript, Redux Toolkit, Node.js, Express.js, MongoDB, Chart.js, AWS, Git.

The GIG Group — Software Developer
Dec 2020 – Aug 2021

Project: GIGM — online transportation booking platform.

- Built customer facing booking features and helped migrate legacy jQuery screens to reusable React components, improving maintainability and cross device usability.
- Integrated backend services and contributed Python/FastAPI functionality, handling loading, validation and API failure states in booking workflows.
- Collaborated with backend engineers on dependable search, booking and checkout interactions and iterative product releases.

Tech Stack: React, Python, FastAPI, jQuery, Bootstrap, Bitbucket, Jira.

Swapspace — Frontend Developer
Mar 2020 – Dec 2020

- Shipped React and Vue.js features for a developer learning and collaboration platform, integrating GraphQL APIs and improving reusable UI workflows.
- Contributed through peer review, iterative feature development and coordination with backend teammates.

Tech Stack: React, Vue.js, GraphQL, Redux, Laravel, PHP, MySQL, MongoDB.

Education

Bachelor of Science (B.Sc.) in Applied Physics
University of Lagos, Nigeria.

Projects

Voice AI Assistant — Live Site
Built a voice-driven assistant with speech transcription, silence detection, contextual answers, live web search and model fallback to handle unreliable responses.

E-commerce Platform — Live Site
A full functioning dessert shopping web app with full cart functionalities, PayPal integration, secure authentication, and an admin CMS dashboard for managing desserts.

Agent Boundary Lab — GitHub
Created a Python evaluation harness for prompt-injection containment, with controlled tool responses, benign/adversarial test cases, trace logging and automated grading.
